4. Stack, without double-counting

Header per chair is the walk-forward record: traits picked by max parent-minus-child gap on seasons before N at $n \geq 10$, printed on season N, N = 2019–2025, pooled. Every printed game is out of sample. The full-window stack (picked on all seasons at $n \geq 20$) and its diagnostics sit in the block below it. Same gate on every slot.

Both chairs resolve to the same games (mirror). Printed once; LAC's record is the complement.

- SEA -7.0** — one population: Sunday late window home fav -7 to -9.5. Not added (no gap with $n \geq 20$ left): equal rest, off a loss, off a 1-score loss, off an ATS miss, off a loss as favorite, off a road game, scored 27–33 last, scored ≥ 30 last....
- Walk-forward 6–8 (42.9%, n=14)** — picked on seasons before N, printed on N, 2019–25. By year: 19:1-2 20:2-2 21:1-1 22:1-0 23:1-0 24:0-3 25:0-0. OOS cover margin median -1.8, $P(>+7)$ 0.21, $P(<-7)$ 0.36. Traits picked in ≥ 4 of 7 folds: Sunday late window home fav -7 to -9.5 (5/7).
