## 4. Stack, without double-counting

Header per chair is the walk-forward record: traits picked by max parent-minus-child gap on seasons before N at  $n \geq 10$ , printed on season N, N = 2019–2025, pooled. Every printed game is out of sample. The full-window stack (picked on all seasons at  $n \geq 20$ ) and its diagnostics sit in the block below it. Same gate on every slot.

Full-window stacks on both chairs resolve to the same games (mirror). The walk-forward folds pick traits per chair, so both blocks print.

- **LV +4.5** — one population: Sunday late window division home dog. Not added (no gap with  $n \geq 20$  left): equal rest, host of a 2+ zone visitor, host of a  $\geq 1000$  mi visitor, off a win, off a 1-score win, off a cover, off an upset win as dog, off a road game....
