division game, home fav -7 or more, total 45–49	9–14	39.1%	23
outdoors, total ≥ 47	109–124–3	46.8%	236

6. What does not apply

- 2+ time-zone trip: no
- double-digit dog: no
- off a 10-point loss: applies to NE
- off a 20-point win: no
- 2nd straight home game: applies to BUF
- 2nd straight road game: applies to NE
- bye next week: no
- off a bye: no
- scored ≤ 10 last: applies to NE
- short week: no
- trip ≥ 1000 mi: no

- TO ≥ 3 last: applies to BUF, NE
- undefeated entering: no
- winless entering: no

7. Stack, without double-counting

Stack floor is $n \geq 20$ (tables use $n \geq 10$) so the conjunction cannot bottom out on the cutoff.

- **BUF -7.0** — one population: division home fav -7 to -9.5; off a win. ATS 8-11-2 (42.1%, $n=21$). Not added (n would fall under 20, or the trait does not narrow the population): off a 1-score win, off a cover, off a win as favorite, off a home game, 2nd straight home game, next game is road, next game is road non-division, next game is prime time....
- **NE +7.0** — one population: division road dog +7 to +9.5; off a loss. ATS 11-11-1 (50.0%, $n=23$). Not added (n would fall under 20, or the trait does not narrow the population): off a loss by 10+, off a loss by 20+, off an ATS miss, off a loss as dog, off a road game, 2nd straight road game, trip 200-1000 mi, 0 time zones....
