line within 3, total ≥ 47	63–71–3	47.0%	137

6. What does not apply

- 2+ time-zone trip: no
- double-digit dog: no
- off a 10-point loss: no
- off a 20-point win: no
- 2nd straight home game: applies to SF
- 2nd straight road game: no
- bye next week: no
- off a bye: no
- scored ≤ 10 last: no
- short week: no
- trip ≥ 1000 mi: no
- TO ≥ 3 last: no
- undefeated entering: no
- winless entering: no

7. Stack, without double-counting

Stack floor is $n \geq 20$ (tables use $n \geq 10$) so the conjunction cannot bottom out on the cutoff.

- **SF -3.0** — one population: Sunday late window fav -1 to -3; off a win; off a win as favorite; TO ≤ 1 last. ATS 10-10-1 (50.0%, n=21). Not added (n would fall under 20, or the trait does not narrow the population): off a 1-score win, off an ATS miss, off a home game, 2nd straight home game, off a division game, next game is road, next game is division, next opponent is a favorite over them (n_line>0)....
- **DEN +3.0** — one population: Sunday late window dog +1 to +3; off a win; off a 1-score win; equal rest. ATS 12-9 (57.1%, n=21). Not added (n would fall under 20, or the trait does not narrow the population): off a cover, off a win as favorite, off a prime-time game, off a home game, trip 200-1000 mi, 1 time zone, next game is road, next game is division....
