total 40–44	179–183–2	49.4%	364
Sunday early window, total 40–44	107–105–1	50.5%	213
Sunday early window, outdoors, total 40–44	85–85–1	50.0%	171

6. What does not apply

- 2+ time-zone trip: no
- double-digit dog: no
- off a 10-point loss: no
- off a 20-point win: applies to CHI
- 2nd straight home game: applies to CHI
- 2nd straight road game: applies to NYJ
- bye next week: no
- off a bye: no
- scored ≤ 10 last: no
- short week: no
- trip ≥ 1000 mi: no
- TO ≥ 3 last: no
- undefeated entering: no
- winless entering: no

7. Stack, without double-counting

Stack floor is $n \geq 20$ (tables use $n \geq 10$) so the conjunction cannot bottom out on the cutoff.

- **CHI –3.5** — one population: Sunday early window fav -3.5 to -6.5 ; off a win; off a win by 14+; allowed ≤ 17 last; TO ≤ 1 last. ATS 8–12–1 (40.0%, $n=21$). Not added (n would fall under 20, or the trait does not narrow the population): off a win by 20+, off a cover, off an upset win as dog, off a prime-time game, off a home game, 2nd straight home game, next game is road, next game is division....
- **NYJ +3.5** — one population: Sunday early window dog +3.5 to +6.5; off a loss; off a 1-score loss; off a loss as dog. ATS 14–15 (48.3%, $n=29$). Not added (n would fall under 20, or the trait does not narrow the population): off a road game, 2nd straight road game, trip 200–1000 mi, 1 time zone, next game is home, next game is home non-division, opponent off a win, opponent off a win by 20+....
