Sunday early window, outdoors, total 40–44	85–85–1	50.0%	171

6. What does not apply

- 2+ time-zone trip: no
- double-digit dog: no
- off a 10-point loss: no
- off a 20-point win: no
- 2nd straight home game: no
- 2nd straight road game: applies to TEN
- bye next week: no
- off a bye: no
- scored ≤ 10 last: applies to TEN
- short week: no
- trip ≥ 1000 mi: no
- TO ≥ 3 last: no
- undefeated entering: no
- winless entering: no

7. Stack, without double-counting

Stack floor is $n \geq 20$ (tables use $n \geq 10$) so the conjunction cannot bottom out on the cutoff.

- **BAL –11.5** — one population: Sunday early window fav –10 or more; off a win; off a win as favorite; opponent off a loss; opponent off an ATS miss. ATS 9–12 (42.9%, $n=21$). Not added (n would fall under 20, or the trait does not narrow the population): off a 1-score win, off a road game, next game is road, next game is road non-division, next game is prime time, equal rest, off a win, opponent off a loss, scored ≥ 30 last....
- **TEN +11.5** — one population: Sunday early window dog +10 or more; off a loss; off an ATS miss; off a loss as dog; next opponent is a favorite over them ($n_{line} > 0$); off EPA ≤ 0 last. ATS 12–8 (60.0%, $n=20$). Not added (n would fall under 20, or the trait does not narrow the population): off a 1-score loss, off a road game, 2nd straight road game, trip 200–1000 mi, 1 time zone, next game is home, next game is division, equal rest....
