6. What does not apply

- 2+ time-zone trip: no
- double-digit dog: no
- off a 10-point loss: no
- off a 20-point win: no
- 2nd straight home game: applies to CLE
- 2nd straight road game: no
- bye next week: no
- off a bye: no
- scored ≤10 last: no
- short week: applies to CLE, PIT
- trip ≥1000 mi: no
- TO ≥3 last: no
- undefeated entering: no

- winless entering: no

7. Stack, without double-counting

Stack floor is $n \geq 20$ (tables use $n \geq 10$) so the conjunction cannot bottom out on the cutoff.

- **CLE +2.5** — one population: Thursday night dog +1 to +3; outdoors. ATS 9–10–1 (47.4%, $n=20$). Not added (n would fall under 20, or the trait does not narrow the population): off a win, off a 1-score win, off a cover, off an upset win as dog, off a home game, 2nd straight home game, host of a short-trip visitor (<200 mi), next game is road....
- **PIT -2.5** — one population: Thursday night fav -1 to -3; outdoors. ATS 10–9–1 (52.6%, $n=20$). Not added (n would fall under 20, or the trait does not narrow the population): off a win, off a 1-score win, off a cover, off an upset win as dog, off a home game, off a division game, short trip <200 mi, 0 time zones....

Feeds: nflverse games.csv (lines, scores, rest), stats_team_week 2015–2026 (yards, pass EPA, TO), play_by_play 2015–2026 (off/def EPA, success rate), data/airports.csv (miles, zones).

IND at WAS · Sunday 2026-10-04 09:30 ET · Week 4 2026

League-wide only. Window: weeks 4–9, 2015–2025. $n \geq 10$. No team streaks. No half-EPA. Lines from nflverse games.csv (snapshot Oct 1). Scores and team-week stats through Week 3; EPA from play-by-play.

Line: IND -3.5 / WAS +3.5, total 48.5. Neutral site (London). Home and road are stripped on this game: anchors are favorite/dog at any site, travel cuts off. Rest: IND 7 days, WAS 7 days. Roof: outdoors.

division game, both teams went over last week, total 45–49	12–16	42.9%	28
division game, both scored 27+ last week	25–20–1	55.6%	46
division game, dome, total $\geq$ 47	17–13–1	56.7%	31
line within 3, total $\geq$ 47	63–71–3	47.0%	137

6. What does not apply

- 2+ time-zone trip: no
- double-digit dog: no
- off a 10-point loss: no
- off a 20-point win: applies to ATL
- 2nd straight home game: applies to NO
- 2nd straight road game: applies to ATL
- bye next week: no
- off a bye: no
- scored $\leq$ 10 last: no
- short week: no
- trip $\geq$ 1000 mi: no
- TO $\geq$ 3 last: applies to NO

- undefeated entering: no
- winless entering: no

7. Stack, without double-counting

Stack floor is $n \geq 20$ (tables use $n \geq 10$) so the conjunction cannot bottom out on the cutoff.

- **NO -2.5** — one population: Monday night home favorite; off a loss. ATS 12–8 (60.0%, $n=20$). Not added (n would fall under 20, or the trait does not narrow the population): off a 1-score loss, off an ATS miss, off a loss as favorite, off a home game, 2nd straight home game, next game is home, next game is home non-division, next opponent is a favorite over them ($n_line > 0$)....
- **ATL +2.5** — one population: Monday night road dog; off a cover; next game is home. ATS 9–12 (42.9%, $n=21$). Not added (n would fall under 20, or the trait does not narrow the population): off a win, off a win by 14+, off a win by 20+, off an upset win as dog, off a prime-time game, off a road game, 2nd straight road game, trip 200–1000 mi....
