6. What does not apply

- 2+ time-zone trip: no
- double-digit dog: no
- off a 10-point loss: applies to GB
- off a 20-point win: no
- 2nd straight home game: applies to TB
- 2nd straight road game: no
- bye next week: no
- off a bye: no
- scored ≤10 last: no
- short week: no
- trip ≥1000 mi: applies to GB
- TO ≥3 last: no
- undefeated entering: no
- winless entering: no

7. Stack, without double-counting

Stack floor is $n \geq 20$ (tables use $n \geq 10$) so the conjunction cannot bottom out on the cutoff.

- **TB +3.5** — one population: home dog +3.5 to +6.5; off a loss; off a 1-score loss; off a loss as dog. ATS 12–11 (52.2%, $n=23$). Not added (n would fall under 20, or the trait does not narrow the population): off an ATS miss, off a home game, 2nd straight home game, host of a

≥1000 mi visitor, next game is road, next game is road non-division, next game is prime time, next game is Thursday (short week ahead)....

- **GB -3.5** — one population: road fav -3.5 to -6.5; off a loss; off an ATS miss; off a loss as favorite; off a home game. ATS 16-5 (76.2%, n=21). Not added (n would fall under 20, or the trait does not narrow the population): off a loss by 10+, off a loss by 20+, off a prime-time game, trip ≥1000 mi, 1 time zone, next game is home, next game is division, long rest (≥10 days)....
